## RISK-BASED INSPECTION REPORT

### **Footnote 1**

**Notes:**

Four staff members have completed the Servsafe for Food Handlers Class.

### **Footnote 2**

**Notes:**

Refrigerated food items should be segregated and separated to prevent possible cross contamination. Keep Condiments on one shelf, vegetables on another. Ready to eat foods should be on a high shelf, raw food and shell eggs should be lower in the refrigerator.

### **Footnote 3**

**Notes:**

For a proper manual ware-washing station there must be the following steps:

WASH  
RINSE  
SANITIZE AND  
AIR DRY

This can be achieved with a two basin sink and "bustub" for the sanitizer. The bustub must be large enough to dip the largest piece of equipment in it for 15 seconds.

Basin one - Wash soapy water

Basin two use to flush rinse off soapy water

Bus Tub for sanitizing solution at 50 to 100ppm chlorine in solution. (Check solution with sanitizer test papers each time solution is made.)

Air Drying racks to allow equipment to dry. ( Do not towel dry equipment)

### **Footnote 4**

**Notes:**

If a third sink is installed to replace the broken dishwasher to facilitate proper ware washing, then an "air gap" must be created on the drain of that sink. It must be the sanitizing sink.
