## Census data to target the uninsured

View and export 2 tables of data identifying geographic locations of eligible uninsured populations:

- The PERCENT of eligible uninsured people - US total
- The NUMBER of eligible uninsured people - US total

You can filter or sort this data on several population characteristics, including federal poverty level, education, and language. Descriptions of all data fields are below. You can also export this data to the format you choose (Excel, etc.) and use the FIPS codes to produce maps. Detailed maps of the PUMAs in each state are available from the [Census Bureau](#).

The data here are for outreach targeting purposes only. They are not suitable for program evaluation or estimating program impact. The number of people with incomes at varying federal poverty levels is based on data from the Census for 2011 and may vary from 2014 estimates. They are good estimates to direct outreach efforts, but are not direct measures of the number of people who may be eligible for coverage through the Marketplace and Insurance Affordability Programs, including Advance Payments of the Premium Tax Credit/Cost Sharing Reductions, Medicaid, CHIP and the Basic Health Program, if applicable.
