18-19	185	125	312	429
19-20	165	335	274	214
20-21	256	537	287	192
21-22	250	264	202	205

## Beginners Compass

Step 1: Hold compass level.

Step 2: Read degrees from point 1 to point 2.

Step 3: Turn the dial to the desired degree.

Step 4: Orient the direction of your body so the red needle is in the red arrow on your compass.

Step 5: Walk the required amount of feet in the direction you're facing to the next numbered post.

Repeat steps 1-5 for each point.

To navigate past an obstacle, turn 90° and walk beyond the object while counting your steps. Next, turn to follow your original bearing past the obstacle, then return to your original path by turning back 90° in the opposite direction and walking the same amount of steps that you previously counted. Finally, retake your bearing and continue on the original path.

\*Degree and Feet refers to moving from the Campground to the Visitors Center. Alt Degree and Alt Feet refer to moving from the Visitors Center to the Campground
